**Related Employment for Graduates with a B.A. in Environmental Studies**

This degree will provide the multidisciplinary knowledge and application required for students to be successful in the social, political, and economic dimensions of sustainability and environmental occupations. A large and increasing portion of environmental jobs are based on non-science, environmentally related fields – such as legal or consulting positions and a wide range of management and government positions – that include a significant social or human relations component.

**Table 1.** Related employment for graduates with a B.A. degree in Environmental Studies (2018)*.
